PROFESSIONAL COVER LETTER

Anamika Verma

AI Engineer | Applied AI | Generative AI & Software Development

Dear Hiring Manager,

I am an AI Engineer with 2.5+ years of combined experience across AI research, software development, technical implementation, and independent engineering projects. Interested in turning emerging technologies into practical, reliable applications.

In my recent role as an AI Research Developer, I contributed to AI research and development, application development, technical integrations, and AI-driven feature implementation within an ERP ecosystem. My work included exploring technical approaches, evaluating tools, working with APIs and databases, developing prototypes, and contributing to solutions across application modules.

My technical foundation spans Python, C++, JavaScript, SQL, backend development, REST APIs, Machine Learning, and Generative AI. I am particularly interested in LLM-powered applications, Retrieval-Augmented Generation (RAG), intelligent automation, and software systems that solve real-world problems.

Alongside my professional experience, I have pursued independent development initiatives and research, including authored work exploring emerging AI and Machine Learning techniques. I hold a Bachelor's degree in Computer Science and have pursued Master's studies in Applied AI Engineering and Machine Learning at Woolf University.

I approach engineering through research, analytical thinking, and disciplined implementation. I value understanding the problem before selecting a solution, building on a clear technical foundation, and improving continuously through experimentation and practical development.

I am currently seeking opportunities in AI Engineering, Applied AI, Generative AI, and Software Development. I am available to join immediately and would welcome the opportunity to contribute to meaningful products, collaborate with strong engineering teams, and grow through challenging technical work.

Thank you for your consideration. I welcome the opportunity to connect and discuss how my background could contribute to your team.

Sincerely,
Anamika Verma
