About

AI Engineer with 2.5+ years of combined technical experience across applied AI research, software development, and AI-enabled applications. Experienced in exploring AI solutions, developing technical prototypes, working with APIs and integrations, and translating technical requirements into practical implementations. Strong foundation in computer science, machine learning, and software engineering, complemented by a published AI research paper and experience in technical training. Focused on building practical, reliable AI solutions while expanding expertise in backend engineering and intelligent systems.

Technical Skills

Programming Languages: Python, C++, JavaScript, SQL

AI & Machine Learning: NumPy, Pandas, Scikit-learn, TensorFlow, PyTorch, Keras, OpenCV, Hugging Face Transformers

Generative AI & LLM Engineering: LangChain, LangGraph, LlamaIndex, OpenAI API, Google Gemini API, Prompt Engineering, RAG, Embeddings, Semantic Search, AI Agents

Backend & API Development: FastAPI, Flask, Django, Node.js, REST API Development, API Integration

Frontend Development: React.js, HTML5, CSS3, Tailwind CSS, Bootstrap

Databases: MySQL, PostgreSQL, MongoDB, SQLite

Cloud & DevOps: AWS, Google Cloud Platform, Microsoft Azure, Docker, Kubernetes, GitHub Actions, CI/CD

Developer Tools & ML Engineering: Git, GitHub, Linux, VS Code, Jupyter Notebook, Postman, Swagger/OpenAPI, MLflow, Streamlit, Vercel, Render

Research & Engineering: Technical Research, Literature Review, Research Paper Analysis, Proof of Concepts, Rapid Prototyping, Model Evaluation, Experimentation, Requirements Analysis, Technical Documentation

Professional Experience

SR Edutechnologies Pvt. Ltd. | AI/ML Engineer R&D — **May 2025 – December 2026**
Hyderabad, India

- Conducted applied AI research to identify opportunities for integrating intelligent capabilities into the company's ERP and Learning Management System platform. Evaluated emerging technologies and translated research findings into practical implementation approaches.
- Developed technical prototypes and proof of concepts to explore AI-driven solutions. Assessed their feasibility and suitability for existing product requirements before integration into application workflows.
- Contributed to the development and integration of AI-enabled features across multiple product modules. Worked with external AI services and APIs to connect intelligent capabilities with existing application functionality.
- Participated in frontend and backend development activities. Worked on application features and API development while supporting database operations and communication between different system components.
- Analysed product requirements and existing workflows to identify opportunities for automation and AI-assisted improvements. Collaborated with developers and management to evaluate technical solutions and coordinate implementation.
- Performed debugging and functional testing across application components and integrations. Prepared technical documentation and research notes to communicate findings and support ongoing development.

GD Goenka Public School | AI Projects Development Training — **Aug 2024 - Apr 2025**
Lucknow, India

- Worked on AI-focused project development and technical exploration. Researched emerging AI technologies and evaluated their practical applications in software development and education.
- Explored AI-based solutions and translated technical concepts into project ideas and implementation approaches. Focused on understanding application workflows and the engineering principles behind intelligent systems.

Projects

Enterprise Document Intelligence and RAG System

Technologies: Python | Generative AI | LLMs | RAG | Embeddings | Vector Search

- Developed a document intelligence workflow designed to process uploaded documents and retrieve relevant information based on natural language queries.
- Implemented a retrieval-augmented generation approach to provide context from document content to an LLM before generating responses.
- Structured the application around document ingestion and information retrieval to support context-aware question answering and reduce dependence on unsupported model-generated information.
- Repository: https://github.com/Anamikaa18/Enterprise-Document-intelligence-RAG

AI Model Serving API

Technologies: Python | REST APIs | Machine Learning | Backend Development

- Developed a backend API for serving machine learning models through structured HTTP requests and responses.
- Designed the inference workflow to accept input data and pass it to the model for prediction before returning structured results to the requesting application.
- Organised the application into separate API and inference components to support maintainability and integration with other software systems.
- Repository: https://github.com/Anamikaa18/AI-Model-Serving-API

ML Experiment & Evaluation Platform

Technologies: Python | Machine Learning | Scikit-learn | Pandas | Model Evaluation

- Developed a machine learning experimentation workflow for preparing datasets and executing model training and evaluation tasks.
- Implemented model evaluation processes to assess performance using relevant metrics and compare experimental results.
- Structured experiment outputs to support systematic analysis and make model evaluation more organised and reproducible.
- Repository: https://github.com/Anamikaa18/ML-Experiment-Evaluation-Platform

Research Publications

AI-Counsellor Using Emerging AI/ML LLM based techniques

International Journal of Scientific Research in Science and Technology (IJSRST) | June 2024

- Developed a Published research on an AI-based counselling chatbot exploring Natural Language Processing techniques for conversational understanding, Investigating sentiment analysis and intent recognition to interpret user inputs and improve conversational context and Exploring Named Entity Recognition to extract relevant information from user messages.
- DOI: 10.32628/IJSRST24113237

Contributions & Independent Development Initiatives

- **Business Website Development:** Independently developed websites for local businesses across different domains, including a movie production house, a gym management business and an advocate's professional practice. Translated client requirements into functional websites with user-friendly interfaces and relevant business information.
- **Vakel at Home – Commercial Application:** Contributed to the development of a commercial application named Vakel at Home. Worked on understanding product requirements and translating the business concept into digital application functionality.

Education

Woolf University 2027

MS in Computer Science - Applied AI Engineering & Machine Learning

Dr. A.P.J. Abdul Kalam Technical University (AKTU) **2024**

Bachelor of Technology - Computer Science and Engineering | CGPA: 7.7/10

Community & Technical Engagement

- **AI Expo – Student Project Mentorship:** Mentored student teams developing AI-based solutions for real-world problems, including pothole detection. Supported technical problem-solving and refinement of project approaches.
- **AI & Technology Knowledge Sharing:** Shared knowledge on AI and emerging engineering on social media platforms
- **Technical Knowledge Sharing – Assam:** Delivered an AI and engineering knowledge-sharing session attended by more than 50 school leaders. Discussed emerging technologies and their practical applications in education.
